The complexity of monitoring a hybrid cloud IT landscape

Do you have a complete overview of all connections?

In a complex IT landscape that spans cloud, on-premise, regional and remote locations, your IT department faces the daily challenge of keeping track of the multitude of systems and connections. The constant coordination and integration of these diverse components requires a high degree of organization and efficiency.

4 practical use cases from everyday IT monitoring

Are you familiar with these use cases from your IT operations?

#1

Home Office

End users regularly experience disconnections in Microsoft Teams meetings when working from home.

#2

Home Office

The printers in the office sometimes take a long time to process print jobs.

#3

Public Cloud

In the SaaS application, data from a public cloud system is only transferred with a delay.

#4

Office

In the office, connection or runtime errors regularly occur in a SaaS application.
